Steps to Distribute Shockwallet via TestFlight:

Build the App:

Open the Shockwallet project in Xcode.
Select the target and set the build configuration to "Generic iOS Device."
Build the app.

Archive the App:

In Xcode, go to "Product" -> "Archive."
The Archive Organizer will open. Select the latest archive.

Distribute via TestFlight:

Click the "Distribute App" button.
Choose "TestFlight" as the distribution method.
Follow the prompts to upload the build to App Store Connect.

Configure TestFlight Build:

Log in to App Store Connect.
Select your app and navigate to the "TestFlight" section.
Add internal and external testers as needed

Submit for Review (Optional):
If you're ready to submit the app to the App Store, you can do so from App Store Connect.
Keep in mind that the review process takes time.

Testing:

Testers will receive an email invitation to join the TestFlight testing group.
They need to download the TestFlight app from the App Store.
Once installed, they can access the Shockwallet beta and provide feedback.

Notes:

Beta App Review:

While TestFlight doesn't require a full App Store review, there is a brief review process for the initial beta submission.

TestFlight Limitations:

Keep in mind that TestFlight builds expire after a certain period. Make sure to refresh the build if needed.
